Q How Do I Upload Images Into Design Space - Windows/Mac?

Cricut Design Space gives you the ability to upload most .jpg, .bmp, .png, .gif, .svg, and .dxf files for free, and converts them into cuttable shapes.

NOTE: The Cricut Design Space App for iOS devices now allows you to upload SVG images and any image saved to your Photos. Click here for step-by-step instructions, and click here for frequently asked questions about uploading images through the iOS app.

What You Need To Know:

There are two different types of uploaded images: Basic and Vector.

Basic Images – include .jpg, .bmp, .png, and .gif file types. These files are uploaded as a single layer, and you have the ability to edit the image during the upload process.

Vector Images – include .svg and .dxf file types. These file are uploaded as previously designed and will automatically be separated into layers after uploading and saving.

🖌 Let's Start

Step 1 - To begin an image upload, click *Upload* on the design panel to the left of the canvas. A window will open which prompts you to choose image or pattern upload. Upload Image allows you to work with basic image types including .jpg, .bmp, .png and .gif image files as well as vector images including .svg and .dxf files. To begin, click *Upload Image*.

Step 2 - Click *Browse* to open the file selector and locate the image you want to use from your computer, or simply drag and drop the file into the upload window. The type of image file you select will determine which flow you are taken through in the succeeding steps. If you select .jpg, .gif, .png, or .bmp file to upload, you will be taken through the Basic image upload flow. If you select a .svg or .dxf, you will be taken through the Vector image upload flow.

		Note: Design Space can accept image file sizes less	than 5MB.

	Bac	Back Gancel Gan	

Option 1 - Basic Image Upload:

- 1. Select the .jpg, .gif, .png, or .bmp file you want to upload. Then click *Open* in the file selector or drag and drop the file into the Design Space image upload window.
- 2. Decide if your image is simple, moderately complex, or complex based on the descriptions found on the screen. Click *Continue*.

≡	Canvas	Untitled *
(+) New		
Projects	Upload image Upload an image from your computer (sg. gf. prg. http://sig.org/csig.or.df)	Select image type Your image will be uploaded as a single layer.
1mages		How complex is your image? Select an option below that best matches its complexity. This ensures you get the best tools to work with your image.
Text		Simple Image with high-contrast colors and a transparent or monochrome background.
E) Shapes		
() Upload		Moderately complex Simple dealls and color, with good contrast between subject and background.
	$\overline{\Lambda}$	Complex
		Images with thine details, bioreade colors, or low contrast indexen subject and bickground. These are more challenging to work with.

3. In this step, you'll define the cut lines of your image. Use the Select & Erase, Erase, and Crop tools to remove the unwanted background from your image. The checkerboard background indicates the areas that have been removed and will not cut. The solid areas represent the image you will use on the design screen.

4. Once you have removed the unwanted areas, select *Preview* to show the cut lines of your image. If the image doesn't appear as desired, click *Hide preview* to return to the editing view and continue removing portions of the image until you are satisfied with the preview. Once the image is how you want it, click *Continue*.

5. Name your image and tag it (if desired) for easy searching later. Decide if you want to save your image as a Print then Cut or as a cut image. Saving as a Print then Cut image will preserve the entire image, including internal colors and patterns, and add it to the design screen as a Print then Cut image. Saving as a Cut image will save only the outer silhouette as the image cut path.

6. When you are done, click *Save*. You will return to the Upload screen. The new image will appear in the Uploaded Images Library at the bottom of the screen. To add the image to your project, click on the image to select it, then click *Insert Images* to add it to your design screen.

Note: Your uploaded images also are available on the Images screen. You can search by image name or tag, or you can select "Uploaded" under the image filter.

Option 2 - Vector Image Upload:

- Select the .svg or .dxf file you want to upload. Then click *Open* in the file selector, or drag and drop the file into the Design Space image upload window. Tip: Cricut Design Space[™] can work with files created from other design software. The files can include solid colors or solid color fills, outlined text, or layers. However, if you use a layered image, you should ensure that in the original file the layers are ungrouped.
- 2. Name your image and tag it (if desired) for easier searching later. Then click Save
